

Instructions to Convert Branch Collector Auto-Latch Basket to Manual-Latch

1. Find three sets of chain links that are attached somewhere on basket.
2. Unfasten the three auto-latch cables from cable to helicopter and secure.
3. Fasten the three chain links, with large ring free, onto cable with rope clamps.

Manual Hooking Operation

When branch collector is lowered onto the ground so that the cable to the helicopter becomes slack, hook up the large ring over the hook. When the helicopter lifts up, the basket will move up first to allow the cones and branches to fall out. When the basket is lowered, unhook the large ring. The basket remains on the cone when the cables become tight again.
